

## CA Honeypot Released

2012-01-22 07:08:15 by Guardian

### CA Honeypot v1.0 Released

An easy to install module with built in table creation (no installer required) and utiising the excellent Project Honeypot API to stop visitors engaged in Comment Spamming, Harvesting and other suspicious activity. It is worth noting that we have been using the code on this site for over 2 years now with NO spam being made and only 1 false postive - though that particular user never came back.

This is a simple to install module, which needs only one line of code (provided) adding to your mainfile.php file. You will need a free [API Key](#) and you can download [CA Honeypot](#) for free.
